Md. Nafiz Ahmed

Full-Stack Software Engineer

Khulna, Bangladesh (open to remote) | +880 1634-324335 | nafizahmed000@gmail.com | nafiz-ahmed-xi.vercel.app
github.com/Nafiz001 | linkedin.com/in/md-nafiz-ahmed-nafiz

EDUCATION

B.Sc. in Computer Science & Engineering

Khulna University of Engineering & Technology (KUET)
2023 – Present

ACHIEVEMENTS

Champion
KUET First Byte Datathon, 2025

2nd Runner-Up
BUET CSE Fest Hackathon, 2026

Hackathons competed in
Techathon Nationals 2026 (IUT), SciBlitz AI Challenge 2026 (IEEE SB CUET), Build with Gemma, PSTU IT Carnival 2026

SKILLS

Languages
TypeScript, JavaScript (ES6+), Python, Go, Java, C/C++, PHP, C#, SQL

Frontend
React, Next.js (App Router, SSR/SSG), Angular, Vue, Three.js / React Three Fiber, Tailwind CSS, HTML5, CSS3

Backend & APIs
Node.js, Express, FastAPI, Spring Boot, Laravel, .NET, REST, WebSockets, Auth (JWT, NextAuth, Firebase)

Data
PostgreSQL, MySQL, MongoDB, Redis, Firebase / Firestore, Prisma

DevOps & Cloud
Docker, Nginx, Kubernetes, CI/CD, Prometheus, Grafana, Azure, Vercel

AI & LLMs
Prompt engineering, LangGraph, OpenAI API, Whisper, Gemma

Tools
Git, GitHub, Postman, Vite, Vitest

LANGUAGES

Bangla – Native
English – Professional working

PROFILE

Full-stack engineer and CSE undergraduate at KUET who ships end to end: React/Next.js front ends, Node, FastAPI and Go services, PostgreSQL and Redis, containerised and deployed to Azure and Vercel. Currently engineering LLM prompt workflows at fionetix. Hackathon-tested on real-time AI, fintech ledgers and resilient microservices.

EXPERIENCE

Prompt Engineer — Present

fionetix solutions | Remote

- Design, optimise and deploy structured prompts that drive generative models in production workflows.
- Engineer systematic prompt pipelines to raise LLM accuracy and keep generated output consistent.

Full-Stack Developer Intern — Jan 2026 – Jun 2026

IniAstra Tech | Remote

- Built features for scalable web applications with modern JavaScript frameworks, owning both front-end UI architecture and back-end database integration.
- Delivered in fast-paced sprint cycles as part of a remote team.

QnA Teacher — 2 years

Udvash Academic & Admission Care

- Resolved students' academic questions for admission preparation, sharpening clear technical communication and problem solving.

SELECTED PROJECTS

Vantage – 6-DOF Robot Arm Control Suite — Live | Code

Techathon Nationals 2026 | React, Vite, Three.js / R3F, OpenAI Whisper, LLM agent

- One motion pipeline driven six ways (joystick, keyboard, voice, autonomous routine, LLM agent, webcam hand gestures); every input becomes the same command through one IK solver and a deterministic safety gate.
- Autonomous PIN entry touches each of 6 keys within ± 5 mm; voice upgraded from Web Speech to Whisper via a server-side proxy.

CoDoctor – Ambient Bangla Clinical Co-pilot — Code

SciBlitz AI Challenge 2026 | Next.js, Tailwind, FastAPI, LangGraph, Azure App Service

- Fuses two phones' Bangla transcripts of a consultation into one; a LangGraph agent team retrieves cited clinical guidelines while deterministic rule engines, never the LLM, flag danger signs and drug interactions.
- Gives the patient a plain-Bangla spoken summary; every AI role has a keyless deterministic fallback so the demo never breaks.

Logarithm Warehouse – Resilient Microservices Platform — Code

BUET CSE Fest 2026 Hackathon | Node.js, PostgreSQL, Redis, Nginx, Docker, Prometheus, Grafana, Azure

- Split a fragile monolith into Order and Inventory services with a database each, behind an Nginx load balancer, with CI/CD to an Azure VM.
- Made chaos testing deterministic across 3 scaled replicas with a Redis-backed global counter; full observability in Prometheus and Grafana.

TakaFlow – Money Movement Platform — Code

PSTU IT Carnival 2026 Hackathon | TypeScript, React, PostgreSQL 18, PgBouncer, Redis, Nginx, Docker

- Wallet to send, request, split and schedule money on a double-entry ledger with idempotency keys and exact bill splitting.
- Scales to three API replicas behind Nginx with PgBouncer and a monthly-partitioned Postgres ledger; Redis for cache and rate limits only.

Vernissage – Multiplayer 3D Art Exhibitions — Code

Go, PostgreSQL 18, Next.js 16, React 19, React Three Fiber, WebSockets

- Curate exhibitions from 8,000+ public-domain works (The Met, Cleveland Museum of Art) and walk through them in 3D with other visitors, served by one Go binary (API, WebSocket hub, image service).

Ghostline & Swarmlight – Browser Games — Ghostline | Swarmlight

TypeScript (strict), Three.js, Canvas 2D, Vite, Vitest

- Ghostline replays hash-verified deterministic physics from input logs, so any lap is a shareable URL; Swarmlight runs 1,500 enemies at 60 fps on one canvas with zero dependencies.
